

Cylinder Filling Valve, Cylinder Valve Repair Kits

Type N201 fills DOT cylinders by weight and stops the gas supply when specified fill weight is reached. Operated by air pressure, it is designed for beam type scales and requires no electrical or mechanical power.

The assembly comes completely piped up and includes special parts that allow the slide weight on the scale to move to zero. A red button appears in the indicator on top of the N201 each time a cylinder is filled to the desired weight.
