

# Large Filler Valves

D140

Fisher offers large filler valves with heavy-duty construction throughout for safe, rapid filling of ASME tanks or trucks. Thick walled bodies, formed seat retainers and generous wrenching flats prevent damage to internal parts. The flow channel design offers low resistance-to-flow for increased pump and hose service. Type D138 & D139 offers single back check valves for use with either a supplementary G Series back check valve or a manual shutoff valve.

Type D140 & D141 provide a two-piece design with both an upper and lower back check. The bubble tight upper back check has a resilient seat for maximum service life. A metal-to-metal lower back check protects against loss of product in case of an accident and permits removal of the upper body with the tank under pressure.
