

LifeGuard™ Hose Ends

GPS LifeGuard Safety Hose
 The **LifeGuard™ Safety Hose** technology* is designed to eliminate the consequences of the hazardous effect of a drive-away, coupling separation, hose rupture or failure during fluid or gaseous transfer operations...now with two critical new features – a Tri-Bolt Breakaway Coupling and an Engineered Compression Spring (ECP). The (ECP's) axial force can be adjusted to address the flow force of the fluid or gas being transferred within the hose assembly to avoid premature checking. The spring unlike the previous invention, does not distort the inner housing tube and also provides internal construction support to the assembly.
